The different IronKey Encrypted Storage device models can be found here <http://www.ironkey.com/en-US/encrypted-storage-drives>.

The Secure Files Volume, where your personal data is stored, is not readable until the device is unlocked via the Unlocker found on the CD Volume labeled "IronKey Unlocker." The CD Volume is read-only and requires an running operating system to be used, therefore, it is not possible to boot from an IronKey Encrypted Storage device nor make it a bootable device.

For bootable IronKey Workspace products please see <http://www.ironkey.com/en-US/windows-to-go-drives/index.html>.
